

GenXPlore

Powerful Data Retrieval and Processing

GenXPlore allows users to extract meaningful data from *one or more databases* regardless of type. Using easy navigation and flexible filtering control of database entities, users can *maximize the usefulness of existing data*.

GenXPlore offers its users an easy-to-use interface devised to help them to *analyse data in various ways*.

This is made possible in an *intuitive* manner allowing extraction of data *without learning complex syntax* required by the databases.

Simplify complex database structures with the use of entities and create *data relationships* even if they are not present in the original database.

Analysis Preparation

The *Data Preparation Wizard* is the perfect tool for preparing your data for *use in other EKM Products*. Common *data integrity issues* can be corrected and frequently used aggregations such as Sum, Average can be added without the need to modify the database structures.

EKM Foundation

The *Genesis EKM* product line provides many ways to visualize your data. GenXPlore provides the data preparation and manipulation tools required to truly *leverage the power of your existing data* using other EKM products.

Benefits

Quickly and Easily combine data from a number of different data sources.

Maximize the potential of your existing data.

Prepare your data to perform analysis.

Works on any database.
