

GenXPlot

Generic - Integrated Plotting Tool for any Data

GenXPlot is a generic *plotting and data-analysis* tool that uses visualization as a powerful tool to uncover important facts that lie hidden inside *large amounts of data*.

GenXplot allows its users the freedom to *interactively explore and correlate* their data. This allows for multi-dimensional plots using *X-Y axis, Colors, Symbols, Sizes and Trends* in combination to identify tendencies and perform meaningful analysis.

GenXplot's *powerful and generic filtering* mechanism and its visual features quickly allow you to *decipher even the most complex data* from any database.

Easy Customization

GenXplot is easily customizable. At the click of a button the user can *save a plot as a Favorite*. Favorite plots can be easily *grouped, recalled and arranged* for comparison. Favorites are easy to *manage and share* amongst users.

Benefits

Quick and Easy Data Visualization.

Maximize the potential of your existing data.

Multi-Dimensional Plotting.

Identify trends and outstanding features.

Customizable Templates.

Works on any database.

Data Classification

Sometimes your existing data is just *too complex to manage* effectively.

GenXplot provides a *flexible data classification* tool that can take your segmented data and *group it into meaningful, logical subsets*. All without changing your original data!
